

## AMENDMENTS TO CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

### **Listing of Claims:**

1. (Currently Amended) A real time traffic condition reporting system comprising:
  - a global positioning unit adapted to compute ~~the~~ information of ~~the~~ a current geometric location of the real time traffic condition reporting system;
  - a radio transmitting receiving unit adapted to receive ~~the~~ information of ~~the~~ multiple geometric locations ~~of where~~ traffic conditions have occurred, and ~~the~~ information ~~of about~~ the corresponding traffic conditions;
  - an output unit; ~~and~~
  - a microprocessor adapted to compare the information of the current geometric location provided by said global positioning unit with the information of the geometric locations ~~of where~~ the traffic conditions have occurred, so as to select the information of the geometric locations ~~of where~~ where the traffic conditions have occurred and the corresponding information ~~of about~~ the traffic conditions subject to a predetermined condition for output through said output unit; ~~and~~  
an input unit adapted to enable a user to input or modify the predetermined condition.
2. (Original) The real time traffic condition reporting system as claimed in claim 1, wherein said predetermined condition means a selected road.
3. (Original) The real time traffic condition reporting system as claimed in claim 1, wherein said predetermined condition means a selected geometric zone.

4. (Currently Amended) The real time traffic condition reporting system as claimed in claim 1, wherein the information of multiple geometric locations to be received by said radio transmitting receiving unit means codes of the geometric locations where traffic conditions have occurred.
5. (Currently Amended) The real time traffic condition reporting system as claimed in claim 1, further comprising memory means adapted to store the information of geometric locations of traffic conditions that have occurred and the information ~~of about~~ the corresponding traffic conditions.
6. (Currently Amended) The real time traffic condition reporting system as claimed in claim 1, further comprising an electronic map database adapted to store electronic maps for fetching by said microprocessor for further output through said output unit with the selected information of the geometric locations of the traffic conditions that have occurred and the corresponding information ~~of about~~ the traffic conditions.
7. (Original) The real time traffic condition reporting system as claimed in claim 1, wherein said global positioning unit is a GPS (Global Positioning System).
8. (Currently Amended) The real time traffic condition reporting system as claimed in claim 1, wherein the information of multiple geometric locations where traffic conditions have occurred and the information ~~of about~~ the corresponding traffic conditions to be received by said radio transmitting receiving unit is provided by a traffic condition control center by radio broadcasting.
9. (Original) The real time traffic condition reporting system as claimed in claim 1, wherein said radio transmitting receiving unit is a pager.
10. (Original) The real time traffic condition reporting system as claimed in claim 1, wherein said output unit is a display.
